## Flora in Beja Lexicon

**Abstract** In the present contribution the Beja botanical terminology is analyzed from the point of view of semantic motivation. The study is limited only to the unborrowed part of the botanical lexicon (with some exceptions), together 76 terms. First 51 terms are etymologized with help of external comparisons with probable cognates in other Cushitic or Afroasiatic languages. The last 25 terms are understandable from the point of view of internal etymology and their semantic motivation is more transparent than in the preceding cases.

**Keywords** botanical terminology, semantic motivation, etymology, borrowing, Beja, Cushitic, Afroasiatic

There are only two special studies devoted explicitly to the Beja botanic terminology. The author of the first collection of the Beja phytonyms was the German botanist and palaeontologist Georg August Schweinfurth (Riga 1836 – Berlin 1925). Its title is ‘*Pflanzennamen der Bega-Sprache zwischen Suekin und Berber*’, published in *Zeitschrift der Gesellschaft für Erdkunde* 4: 334–339, 1869. It contains 146 phytonyms in a very imperfect transcription with corresponding Latin botanic counterparts. The second scholar operating in this field was the Swiss Egyptologist, Assyriologist, Arabist and generally orientalist, Johann Jakob Hess (Fribourg 1866 – Zürich 1949). He is the author of the article ‘*Geographische Benennungen und Pflanzennamen in der nördlichen Bischari-Sprache*’, *Zeitschrift für Kolonial-Sprachen* 9: 209–225, 1919. Hess had collected 144 phytonyms, all carefully recorded, with sophisticated grammatical and etymological comments. He was able to identify the Arabic counterparts, frequently from dialects of Sudan, Yemen or Central Arabia, which could be the direct sources of some Beja plant names. Occasionally he added the Ethio-Semitic or Egyptian parallels. All his *comparanda* may be seriously accepted till the present time.

The aim of the present study is to classify the etymologizable part of the botanic lexicon of Beja from the point of view of semantic motivation. With exception of several cases, the identified loanwords are excluded.

The remaining part of the etymologizable botanic lexicon was divided into the following sections:

- A. Plant names with probable parallels in other Cushitic and/or Afroasiatic languages (18),
- B. General terms describing vegetation, including parts of plants (27),
- C. Products, materials and instruments made from plants and their parts (6),
- D. Plants whose names are based on the members of a human society (3),
- E. Plant names motivated by human and animal body parts (11),
- F. Plant names motivated by animal names (11).

Cu: (E) Elmolo *étep-te*, pl. *étep* f. ‘bark (of tree)’ (He), although one would expect *d* as the reflex of \**d*, cf. Elmolo *däl-* ‘to bear children’ < pECu \**dal-* ‘to beget, give birth’ (Sasse 1979: 61); maybe also Som of Gabley *jidhif* ‘bark (of tree)’ (Ehret and Nuuh 1985: 243) = *jídif* and *jílif* ‘Rinde, Schale, Hülse’ (Re), if we accept a dissimilation from the partial reduplication \**diđif*, cf. Som *jádi* ‘Stachelschwein, Hystrix cristata’ (Re) vs. Or Wellega *dädee* ‘porcupine’ (Gg). Lit.: Zaborski (1989: 578) Beja + Elmolo.

2. *aggaab* m. ‘stalks, straw’, def. sg. *w'agga*, def. pl. *y'agga* (Wd) = ág(g)a ‘straw, esp. durra stalks’ (Rp) = *ag(g)a* m. ‘das Stroh von Sorghum vulgare’ (Re) = ága m. ‘Halm, Schilf (von Durra)’ (Al) = *o'agga* ‘das Durraschilf’ (Mu) Reinisch (1895: 10) sought a connection with Tigre *'äge* ‘sorte d’herbe grosse ou de jonc, dont on revêtit les maisons par le côté’ (d’Abbadie apud LH 380) and Nubian: Mahas and Kenuzi *agē* ‘das Stroh, Durra-Stroh’ (Lepsius 1880: 266) ~ Mahas-Fadidja *áge* ‘Stengel’, Kenuzi-Dongola *hágé* ‘Stroh’ (Reinisch 1879: 5, 64, 229). Murray (1923: 5) added Coptic *አ&ር*, *ኦ&ር*, without translation. It could be Coptic *ኦ&ር* ‘sesame’, Demotic *ȝky* id. But there is also Coptic *ሰ&ዕቅ*, *ቤ&ዕቅ* ‘jonc, roseau’, Demotic *ȝyky* ‘Schilf’, besides *ȝk(y)r* ‘Schilf, Dickicht’ (Vycichl 1983: 155), which agrees better in semantics especially with the Tigre word, but the internal structure of the Coptic and Demotic word ‘reed’ probably excludes any relation to the Beja-Tigre-Nubian areal isogloss.

### 3. *allay* f., pl. *allaya* ‘flower’ (HuB)

Cu: (E) Or Wellega *ililli* ‘flower’ (Gg; Borello), Harar *ilili* (Cohen), maybe borrowed into Harari (EtSe) *ēläd* ‘flower’ (Leslau 1963: 25 following Cohen) ||| Be: (S) Ahaggar *ēlēl* ‘laurier-rose’ (Fc), Taitoq *ilel* (Masqueray); (N) Shilha of Tazerwalt *alili* ‘Oleander’ (Stumme), Kabyle *ilili* ‘laurier-rose’ (Dallet) etc., besides Seghrushen *alillu* ‘fleur’ (Destraig), cf. also Laoust (1920: 503); Woelfel (1955: 134).

Cohen (1947: n. 118) Or + Be.

Originally apparently \*‘white’, cf. *ela* ‘white’, as the diminutive to *era*

‘white’ (Roper 1928: 147). Similarly Reinisch (1895: 27): *éela/éera* ‘weiße Farbe; weiß, licht’ = *eerab/eelab* ‘white’ (HuB) = *é:rāb/é:lāb* id. (Starkey) = *eera/dim. eela* id. (Vanhove). #### 7. *engli* f. ‘Rinde’, cf. *kwahūit éngli* ‘Eierschale’ (Re), plus the variant *néegili* f. ‘Eierschale’ (Re) = *nigiri* f. ‘scale, scab, eggshell’ (Rp)

#### 8. *angwa* f. ‘dom-palm leaf, unopened, used for making fibre’ (HuB) = *angwaat* f. ‘mat of dum palm leaves’, def. sg. *tu'angwa*, def. pl. *ti'angwa* (Wd) = *angwa* f. ‘palm leaf’ (Rp) = *angwat* ‘palm leaf’ (St) = *tu'angʷa*, indet. *angʷaat* ‘Blattfieder der Dattel- und Dumpalme’ (Hs) = *arigwa* f. ‘Dumpalme, Hyphaena thebaica und das Palmenblatt zum flechten von Körben, matten etc.’ (Re) = *ángʷa* f. ‘Palmbrett’ (Al)

#### D. Plants whose names are based on the members of a human society

1. (*u*) *duur* ’ärə<sup>h</sup> ‘ein Kraut’ (Hs)

Comparing it with Ar colloquial *betâṣ wilâd el-ṣamm* ‘das den Vettern gehört’, Hess (1918–1919: 219) concludes that Beja *duur* = Ar *ṣamm* ‘Onkel’.

8. *naal* m., pl. *nal* ‘Knoten, Glied im Gras-, Strohhalm’ (Re) = ?*naal* m., pl. *năl* ‘Bettgestell’ (Al)

Could it be related to *n'áli* f. ‘groin’ (Rp)?

9. \**sa* f. (Almkvist 1885: 55), recorded as *ssaat* ‘Premna resinosa’ (Schw)  
 It is tempting to identify here the motivation based on the homonym *sa* f. ‘Leber’ (cf. Almkvist 1885: 55).
